

Post-Omnibus CSRD: scope & deadlines

One page to know if the CSRD still applies to you after the 2026 Omnibus, and the dates that matter. Current as of 8 June 2026.

1. Are you in scope?

The test that decides everything (EU companies): you are in mandatory CSRD scope only if you exceed **both** thresholds - more than **1,000 employees** AND more than **EUR 450 million** net turnover. It is a cumulative AND test; the old two-of-three test and the balance-sheet criterion are gone.

EU undertaking

IN

over 1,000 employees AND over EUR 450m turnover → first report **FY2027 (published 2028)**.

OUT

below either threshold → out of mandatory scope. You may report voluntarily using the **VSME** standard.

Non-EU parent group

IN

over EUR 450m EU turnover AND a large EU subsidiary or an EU branch over EUR 200m → in scope, first report **FY2028 (published 2029)** via the non-EU standard (N-ESRS).

OUT

below the EU-turnover or presence test → out.

Listed SMEs

Out of mandatory scope. The former Wave 3 listed-SME category was removed by the Omnibus. Use the voluntary **VSME** standard if you choose to report.

Smaller suppliers (value-chain cap)

If you have **fewer than 1,000 employees**, an in-scope customer **cannot require** more sustainability data from you than the voluntary **VSME** standard contains.

2. The dates that matter

Date	What happens
18 Mar 2026	Final Omnibus I Directive (EU) 2026/470 enters into force.
17 Sep 2026	Target date for the Commission to adopt the revised (simplified) ESRS.
FY2027	Revised ESRS apply (early voluntary adoption allowed for FY2026).
19 Mar 2027	Member State transposition deadline for the new CSRD thresholds.
2028	First reports from newly in-scope companies (covering FY2027).
2029	First reports from in-scope non-EU groups (covering FY2028).

Companies already reporting since FY2024 (former Wave 1) that remain above the new thresholds keep reporting. Those that fall below may get a Member-State-optional pause for FY2025-FY2026, then exit from FY2027.

3. What an in-scope company reports

The how

- A **double materiality assessment** (impact + financial) sets which topics you disclose.
- Report against the **ESRS** (12 standards: ESRS 1 & 2 cross-cutting, E1-E5, S1-S4, G1). ESRS 2 is mandatory for everyone; topical standards follow the materiality result.
- **Limited assurance** by a third party (the planned move to reasonable assurance was dropped).
- **Digital tagging** in Inline XBRL under ESEF.

Key facts to keep

- CSRD = Directive (EU) 2022/2464; replaced the NFRD.
- 80% of previously-covered companies removed from scope (**European Commission** estimate), roughly 50,000 → 5,000.
- Mandatory ESRS datapoints cut by roughly 60-70% in the revision.
- Double materiality survives as the core principle.
- EU Taxonomy (Art. 8) and GHG Protocol Scope 1-2-3 feed the disclosures.

Not sure which box you are in? Use the free CSRD scope checker at csrd-tools.com/scope-checker for a tailored steer, and get plain-English alerts the moment the rules move with **The CSRD Brief**.
